

Leadership in Energy and Environmental Design (LEED®) is an industry certification program through the U.S. Green Building Council organization. You can find more information at www.usgbc.org.

LEED® Certification is for projects, not products, but Calem Technology products used as project materials can contribute toward the points needed for the project certification. Calem Technology tapes and radiant barriers product categories have a number of products that can help contribute to the LEED® credits – Contribution Credits or Compliance Credits.

Since tapes are typically a small percent of the total material cost for a project, Calem Technology products are more valuable in obtaining Compliance Credits for LEED® projects in the *Indoor Environmental Quality Category*. To be eligible towards the LEED® Compliance Credit, all materials used on the building structure must meet the VOC levels. Based on the VOC requirement, most tapes qualify towards the 1 credit. A partial list of products eligible for Compliance Credits is listed below. Products not listed may be compliant, please contact Calem Technology for more information.

The product below meet the criteria of LEED-NC Environmental Quality (“EQ”) Credit 4.1: Low-Emitting Materials: Adhesives & Sealants under the United States Green Building Council’s Rating System for New Construction & Major Renovations (LEED-NC), Version 2.2, Core and Shell (LEED_CS), Version 2.0, and Commercial Interiors (LEED_CI), Version 2.0.
